Dissemination Plan

This report addresses the following InProSSA project results

- **6.3 Scientific dissemination plan**
- **6.4 Scientific dissemination report**
- **6.5 Follow-up research strategies**

All three results are covered by this report as a whole: the dissemination activities are listed in the table below, and the follow-up research strategies are set out in Follow-up research strategies and exploitation.

Dissemination activities

Category	Contribution	Venue / channel	Date	Status
Scientific	*An Intermediate Representation Format for Industrial Optimization Problems* (del Río et al.)	RISC Report 26-04	Apr 2026	published
Scientific	*Autoformulation of optimization problems with trees of thoughts for LLMs* (Blaimschein)	Master's thesis, JKU Linz	2026	published
Industry	"Hybride KI als Schlüssel für die Automatisierung" (Bögl)	All About Automation, Wels	20–21 May 2026	delivered
Scientific	"Improving Optimisation Formulations in Industrial Settings with LLMs" (del Río)	SCML-2026, Hagenberg	6–8 Jul 2026	delivered
Scientific	"Generational approach for Metaheuristic discovery" (Kinast, Bögl)	IFORS 2026, Vienna	12–17 Jul 2026	delivered
Scientific	*Unifying Search Paradigms using optDSL* (Bögl)	Technical report	28 Oct 2026	written
Industry	End-to-end demo	Partner workshops	Q4 2026 – 2027	in progress
Scientific	Journal submission: hybrid optDSL	OR Spectrum / EJOR / CEJOR	Q1–Q2 2027	planned
Scientific	Follow-up conference paper	EuroCAST / PPSN / GECCO	2027	planned

Full bibliographic details are in Appendix: Bibliography.

Follow-up research strategies and exploitation

This section describes how the approach developed in InProSSA will be further developed after the end of the project. The strategy pursues two tracks: a follow-up COMET project that transfers the approach to industry, and the continued refinement of the method in the APA project.

COMET project

In 2026, together with the scientific partners FH Hagenberg and Software Competence Center Hagenberg, a COMET proposal was planned in which the developed approach would have been transferred to industry. Due to the difficult economic situation, industrial partners were very reluctant to commit to such a project, so the application was postponed until 2028.

Auto Prescriptive Analytics (APA)

At the end of the project, the approach will be further refined in the Auto Prescriptive Analytics project (funded by the government of Upper Austria in the program #upperVISION2030). The goal is to overcome the current limitations and refine the approach to the point where it can be applied in industrial research projects.
